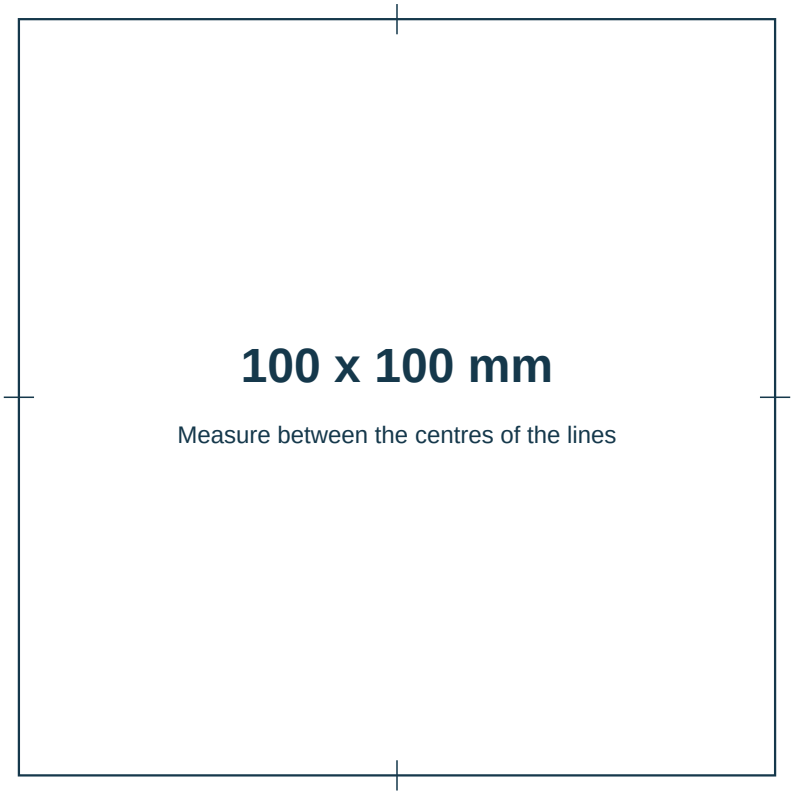
Print alignment check.

Xerox Phaser 6010N / A4 calibration sheet

1. Print at 100% on A4 paper. Turn off Scale to Fit.
2. Measure the square and the frame distance from all four paper edges.
3. Enter the measurements in Calibration, calculate and save the corrections.

Target: a 100 x 100 mm square and a frame 10 mm from every paper edge.



HOW TO READ THE MEASUREMENTS

If either side is not 100 mm, adjust the scale for that axis.

Left / right margins of 15 / 5 mm: move 5 mm left (-5 mm).

Top / bottom margins of 15 / 5 mm: move 5 mm up (+5 mm).

New corrections are calculated relative to the calibration already saved.

If the square is 100 x 100 mm, keep the scale unchanged and adjust position only.

Width: ____ mm Height: ____ mm

Left: ____ Right: ____ Top: ____ Bottom: ____ mm
